

Confirmation of Ring of Firing Is Waking Up 8-28-26

FOR THE GLORY OF FATHER GOD & JESUS CHRIST

My 1st Encounter & Heavenly Announcement From Angel Gabriel 10-31-21 @ 4:46 AM

“This great earthquake shall be the result of both the shaking and man's evil weapons that will start a chain reaction in the islands below in the place known as the Ring of Fire by man. This shall lead to the great shaking of your world.

Redstone, Russia, Morocco, Boston & the Ring of Fire 7-6-26@1:31 PM

I shake the ground, I shake the ground. Look toward the Ring of Fire. Look toward the Ring of Fire. Look toward the Ring of Fire. I'm shaking it because I'm waking it up....fully awake in preparation for My return.

Fire & Destruction for the Blue Ridge Mountains & Others 8-23-26@12:12 PM

I'm waking up further, the Ring of Fire and shall burn and purge more land, more ritual sites, when I give the command for it to all erupt like a chain reaction, for I am the Creator of them all. My earth shall rise up and aid in the fight against those that do evil. No longer can the blood still be absorbed, for so evil has man and the Earth inhabitants become.

Magnitude 5.6 earthquake jolts Alaska in latest seismic activity along Pacific Ring of Fire

So far, the USGS says residents in Anchorage, Hope and Kenai reported feeling the shaking.

🔥 Ring Of Fire Weekly Update: A Restless Week Around The Pacific 🔥

August 17–23, 2026

Another intense week around the Ring of Fire has delivered major earthquakes, long-running seismic sequences and fresh volcanic unrest.

The largest earthquake was a magnitude 6.7 beneath Peru, while Japan was hit by a magnitude 5.8 near Toride followed less than a day later by a magnitude 6.0 off southern Hokkaido.

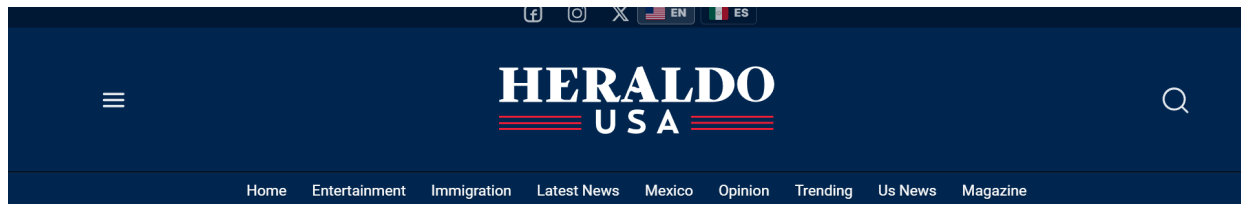

Indonesia remains one of the biggest areas of concern, with repeated magnitude 5 earthquakes continuing around Ruteng and Ende following the much larger magnitude 7.7 earthquake earlier this month.

RING OF FIRE

Ring of Fire records 187 earthquakes in seven days: What's behind the surge?

The Pacific Ring of Fire recorded 187 earthquakes of magnitude 4.5 or higher in one week, as experts continue to monitor one of the world's most seismically active regions.

Ring of Fire Volcanic Activity in July 2026

In **July 2026**, the **Ring of Fire** experienced one of its most intense volcanic episodes on record, with **multiple active volcanoes erupting simultaneously** across Indonesia, the Philippines, and other Pacific regions.

Indonesia – Major Eruption Cluster

At least **seven volcanoes** across the archipelago were active, including **Mount Merapi**, **Mount Semeru**, **Anak Krakatau**, and **Mount Lewotobi** at Level 3 “Standby” alert, just below the maximum

 natureweatherhub.com .

- **Merapi** produced regular lava avalanches and pyroclastic flows from its upper southwest flank.
- **Semeru** (Java’s highest peak) released visible ash plumes from satellite imagery

 natureweatherhub.com .

- **Anak Krakatau** continued its eruptive cycle since 1927, and **Dukono**, **Ibu**, and **Lewotolok** in eastern Indonesia also erupted steadily  natureweatherhub.com .

The activity spanned over **2,000 km** of the Ring of Fire arc, from Java to the Maluku Islands, linked by a shared subduction zone magma system  natureweatherhub.com .

Philippines – Kanlaon Volcano

On Negros Island, **Kanlaon Volcano** remained under **Alert Level 3** (“magmatic unrest”) with a possible hazardous eruption within days  YEET MAGAZINE . It had a history of major eruptions in 2024–2026, including a February 2026 event that evacuated over 15,000 people  YEET MAGAZINE .

Global Context – July 3, 2026 Surge

On July 3, 2026, **Mount Etna (Italy)**, **Fuego (Guatemala)**, and several Indonesian peaks (Semeru, Ibu, Dukono) erupted together  Archyde . This multi-site activity heightened risks for **ash plumes affecting aviation** and **economic disruption** due to potential jet stream ash transport  Archyde .

Hazards and Impacts

- **Local:** Evacuations, exclusion zones, and destruction of infrastructure near active slopes.
-

This multi-site activity heightened risks for **ash plumes affecting aviation** and **economic disruption** due to potential jet stream ash transport [Archyde](#).

Hazards and Impacts

- **Local:** Evacuations, exclusion zones, and destruction of infrastructure near active slopes.
- **Regional:** Ash clouds could disrupt air travel across Southeast Asia and the Pacific.
- **Economic:** Potential supply shocks from Indonesia’s nickel and palm oil exports [Archyde](#).

Summary

July 2026 saw **widespread, simultaneous volcanic activity** along the Ring of Fire, with Indonesia as the epicenter, supported by unrest in the Philippines and other Pacific regions. The scale and number of eruptions made it a significant global hazard period, with both immediate local dangers and potential long-term economic effects.

🔥 RING OF FIRE 🌋: A magnitude 6.7 earthquake struck Peru on Thursday amid a recent stretch of powerful earthquakes along the Pacific Ring of Fire and nearby plate boundaries. The quake follows a magnitude 7.7 near Indonesia last week, a magnitude 7.4 in Colombia earlier this month and a magnitude 7.5 in Venezuela in June, according to the USGS.

USGS Says 2026 Earthquake Activity Is Near Average

1

Likes

36

5h

Ago

A magnitude 7.7 earthquake struck Indonesia's Flores Island, triggering a tsunami warning and causing deaths. The event comes amid several powerful earthquakes reported around the world, including magnitude 7.4 in Colombia and 7.5 and 7.7 in Venezuela. However, the US Geological Survey says earthquake activity in 2026 remains close to average. About 20,000 earthquakes occur worldwide each year, including an average of 16 magnitude 7.0 or greater events. Scientists say growing urban populations and coastal development remain major factors in earthquake risk and disaster impacts.

Ring of Fire Activity in 2026 — Is It Increasing?

Recent data shows that the **Pacific Ring of Fire** — the horseshoe-shaped belt of subduction zones and volcanoes around the Pacific Ocean — has experienced **above-average seismic activity in 2026**, though whether this marks a long-term increase is still under scientific review.

Recent surge in 2026

- In **one week in August 2026**, the Ring of Fire recorded **187 earthquakes of magnitude 4.5 or higher**, according to USGS data [Heraldo USA](#) .
- This included notable events such as a **7.2 magnitude quake in Peru**, a **5.9 in Japan**, and multiple tremors in Costa Rica, Alaska, and Indonesia [Heraldo USA](#) .
- Earlier in the year, multiple quakes struck within 24 hours, including a **7.1 and 7.5 magnitude twin event in Venezuela** and a **6.9 in Japan** [Dominican Today](#) .
- The region also saw **187+ quakes in seven days** in August, with most being minor (magnitude 1.5–4.5) and not widely felt [Heraldo USA](#) .

Trend vs. normal range

- Globally, about **20,000 earthquakes** are recorded each year, with roughly **133 magnitude 6+ quakes annually** from 2016–2025 [Rolling Out](#) .
 - By mid-August 2026, **91 magnitude 6+ quakes** had occurred worldwide, slightly above the decade's average but still within normal range [Rolling Out](#) .
-
