FOR THE GLORY OF FATHER GOD & JESUS CHRIST

Please try, test & discern this in Jesus Christ's Name

I strike into the heart of Asia and send forth a shaking, a quaking, a flooding of different sorts to this land that persecutes My own and women.

HEART OF ASIA

<https://polsci.institute/south-asia/strategic-geography-afghanistan-heart-asia/>

<https://pakasiayouthforum.com/afghanistan-the-heart-of-asia/>

Afghanistan is called the "Heart of Asia" because of its central geographic location, strategic borders, historical role in trade, and pivotal influence on regional stability and connectivity.

Strategic Geographic Location

Afghanistan sits at the crossroads of **South Asia, Central Asia, East Asia, and West Asia**, making it a natural bridge between major regions of the continent [banotes.org +1](#). It shares borders with **six**

countries: Pakistan (2,670 km), Iran (921 km), Turkmenistan (804 km), Uzbekistan (144 km), Tajikistan (1,357 km), and a narrow 91 km border with China through the Wakhan Corridor

[polsci.institute +1](#). This central position has historically made Afghanistan a key link in the **ancient Silk Road**, facilitating trade, cultural exchange, and the movement of ideas between East and West

[banotes.org +1](#).

Historical and Cultural Significance

Afghanistan's **mountainous terrain**, dominated by the Hindu Kush, has created natural fortresses that both protect and connect civilizations [polsci.institute +1](#). Cities like **Balkh, Herat, and Kabul** were major hubs along trade routes, contributing to the flow of goods, culture, and knowledge across Asia

[pakasiayouthforum.com](#). Its location has made it a focal point for empires, from Alexander the Great to the British Empire, the Soviet Union, and modern powers, highlighting its enduring strategic importance [banotes.org +1](#).

2026-09-08 23:01:58 UTC (2026-09-08) - approx. 4:01 AM UTC+5 local

MAGNITUDE M4.3 (mb)	TIME 23:01 UTC ≈ 4:01 AM UTC+5	DEPTH 133.5 km intermediate Depth
COORDINATES 36.634°, 71.584°	FELT BY No felt reports	STATUS ✓ Reviewed by USGS

On September 8, 2026 at 23:01 UTC, a magnitude 4.3 intermediate depth earthquake struck 7 km SE of Ashkāsham, Afghanistan, at a depth of 133.5 km and coordinates 36.6338°, 71.5835°.

Physical scale: An earthquake of magnitude 4.3 releases seismic energy equivalent to roughly **43 metric tons of TNT**. Empirical fault-scaling laws (Wells & Coppersmith, 1994) estimate the subsurface rupture length at approximately **558 m** — a useful intuition for the size of the slip patch on the fault.

Devastating Flash Floods in Afghanistan Af

Devastating flash floods have swept through parts of Afghanistan, leaving communities facing destruction, displacement and urgent humanitarian needs. Homes and livelihoods have been damaged, while families are struggling to access safe shelter, clean water and essential supplies.

In the aftermath of such disasters, rapid humanitarian support is vital to help affected communities survive, recover and rebuild.

Your support can help provide emergency assistance to families affected by the floods.

Cancun, Cancun is about to meet Ed, Edouard.(Ed-Ward)

Is “Edouardo Edward” in English?

Yes — “Edouardo” is a variant of the English name “Edward,” and “Edward” itself is an Old English name meaning “wealthy guardian” or “prosperous protector.”

Origin and meaning

- **Edouardo** comes from Old English and Germanic roots, formed from *ēad* (“wealth, fortune, prosperous”) and *weard* (“guardian, protector”) [♥ mynamelist.com +1](#) .
- In English, the standard form is **Edward**, which has been used since Anglo-Saxon times [W Wikipedia](#) .
- **Edouardo** is a Portuguese, Spanish, and Brazilian variant of Edward, and also the French form **Édouard** [♥ mynamelist.com +1](#) .

English connection

- In English, “Edward” is the direct equivalent of Edouardo [www.frenchdictionary.com +1](#) .
- “Edouardo” is not a standard English name, but it is an internationally recognized variant, especially in Romance-speaking countries [♥ mynamelist.com +1](#) .
- The name “Edward” in English carries the same meaning and heritage as Edouardo, so they are linguistically and historically linked [T Wisdom Library +1](#) .

Summary

If you see “Edouardo Edward,” it’s essentially the same name in two forms:

Edward Scott Trunk

Eddie Trunk was born **Edward Scott Trunk** on August 8, 1964, in Summit, New Jersey, and grew up in Madison, New Jersey, where he attended Madison High School [Wikipedia+1](#). He is widely recognized as a music historian, radio personality, talk show host, and author, particularly known for his work in promoting hard rock and heavy metal music [Wikipedia+1](#).

Early Life and Career

Trunk developed a passion for music at a young age, influenced by bands such as Kiss, Aerosmith, Rush, UFO, and Black Sabbath [Wikipedia+1](#). He began writing record reviews in high school, which laid the foundation for his career in the music industry. By 1986, he joined Megaforce Records, eventually becoming vice president at age 25 and helping to revitalize the careers of artists like Ace Frehley [Wikipedia+1](#).

Green Bay Wisconsin & Alberta Wind Gusts

I send swiftness of winds like that of speeding chariots and horses with destructive forces that shall surprise many as the waters keep churning storms upon storms, but it's also upon the land they come. Destructive winds of many kinds but not just to America-Babylon, but to Alberta, Canada. To Green Bay, Wisconsin, the same yet different in Babylon-America.

Monitor [weather.gov](#) or [tulsaworld.com/weather](#) for updates.

This weather alert was produced with AI assistance using National Weather Service data.

On September 7, 2026, Calgary, Alberta experienced wind gusts reaching 46 km/h from the north-northwest (340°), while Edmonton had light rain and drizzle with generally calm winds that day.

Calgary Wind Gusts calgary.weatherstats.ca

- **Maximum Gust:** 46 km/h
- **Wind Direction:** North-Northwest (340°)
- Calgary's wind gusts on this day were moderate in strength, consistent with typical early September conditions in southern Alberta.

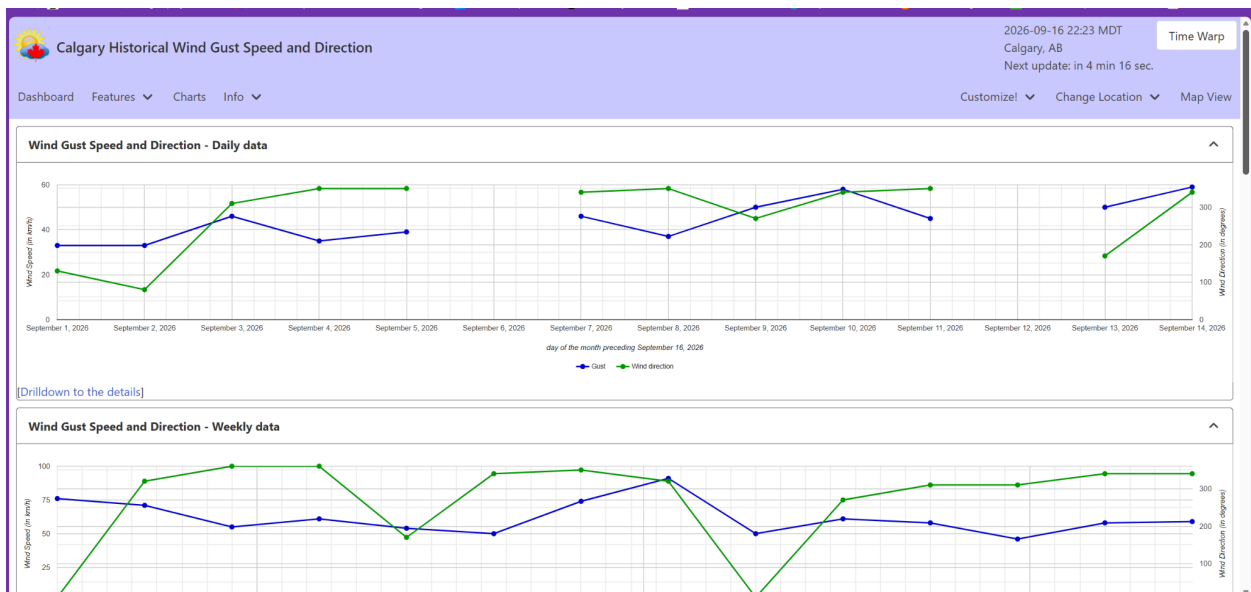

Edmonton Observations [Weather Spark](#)

- **Weather:** Light rain and light drizzle were reported in Edmonton. [1](#)
- Although detailed gust measurements are not listed in the available historical dataset, the conditions indicate **relatively mild wind activity** typical during light precipitation events.
- Edmonton's atmospheric conditions included normal temperature and humidity ranges for early September, suggesting gusts were likely below severe levels.

[1 Source](#)

Context

- Alberta experienced varied weather on September 7, 2026, with southern regions like Calgary experiencing moderate wind gusts, while central areas such as Edmonton had light rain and drizzle, leading to less intense winds.

Green Bay, Wisconsin experienced gusty winds on September 13, 2026, as part of scattered thunderstorms affecting the Great Lakes and Upper Midwest regions.

Weather Conditions

On September 13, 2026, Green Bay experienced cooler than average temperatures at **73°F**, following an early September trend that had been warmer by roughly 4.3°F compared to historical norms [↪ easeweather.com](#) . These conditions coincided with scattered storms across the Midwest, which produced **gusty winds, heavy rainfall, and localized severe weather threats** [↪ UPI](#) .

Storm Impact

Severe weather experts highlighted that **damaging wind gusts** were a key threat in a corridor from northwest Kansas to far southern Minnesota and western Wisconsin. Although Green Bay was slightly east of the primary corridor, the city still experienced **blustery conditions from these scattered September storms**, which also brought rain and isolated hail events [↪ UPI](#) . The storms were part of an active weather pattern affecting the Great Lakes during mid-September, contributing to **moderate rainfall and persistent gusty conditions** across the area [↪ easeweather.com](#) .

Additional Notes

- **Rainfall and precipitation:** September in Green Bay typically sees **around 1.81 inches of rainfall over about 6 rainy days**. Storms on September 13 likely contributed to this monthly total [↪ 1](#) .
- **Hail activity:** No major hail reports were specifically tied to September 13, but the region had previous recent hail events earlier in June 2026 [↪ 1](#) .
- **Safety:** Residents were likely advised to exercise caution outdoors and on the roads due to wind gusts and localized thunderstorms during the period [↪ 1](#) .

[UPI](#) 🌧️ [↪ 3 Sources](#)

In summary, the **gusty winds in Green Bay on September 13, 2026**, were associated with scattered thunderstorms moving across the Upper Midwest, producing blustery conditions, rain, and minor localized

high winds in green bay wisconsin sept 10 2026

On September 10, 2026, Green Bay, Wisconsin, experienced high winds, with gusts reaching significant speeds that could impact outdoor activities and safety. Wind conditions were closely monitored, indicating a need for caution during this period.

wind.localconditions...

Wind Conditions in Green Bay on September 10, 2026

High winds were a notable feature of the weather on this date.

- **Wind Speed** — Gusts were reported at speeds exceeding 30 mph, affecting local conditions.
- **Impact on Activities** — High winds posed risks for outdoor events and travel, prompting advisories for safety.
- **Forecast Accuracy** — Meteorological predictions indicated these conditions well in advance, allowing for preparedness.
- **Historical Context** — Such wind events are not uncommon in September, marking a transition into fall weather patterns. Windy.app +2

Gusty winds in Green Bay, WI on September 14, 2026, reached speeds of 10 to 20 mph with gusts up to 35 mph. These conditions were driven by a warm front and low-pressure system moving from the Great Plains, which also brought heavy rain, thunderstorms, and a Small Craft Advisory to the bay area.

Hail and Wind Damage in Green Bay, WI – September 15, 2026

On September 15, 2026, Green Bay, WI experienced hail up to 2.25 inches in some areas, with multiple reports of moderate-level wind damage, but no confirmed tornadoes.

Hail activity

According to HailGeeks' September 2026 hail maps, **Green Bay and nearby areas saw hail events on Sep 15, 2026** with sizes ranging from **0.75 inches to 2.25 inches** www.hailgeeks.com.

- The **largest reported hail** in the Green Bay region that day was **2.25 inches**, classified as *moderate* damage potential www.hailgeeks.com.
- Other reports in the same day's map show hail sizes of 1.00–1.25 inches in multiple counties, with "Home Inspection Score" ratings indicating low to moderate damage risk www.hailgeeks.com.
- No hail reports for Green Bay on Sep 15 are listed in the local 2026 hail database [Stormer Site](https://www.stormersite.com/hail_reports/green_bay_wisconsin/2026), but the state-wide map confirms activity in the broader region [Stormer Site](https://www.stormersite.com/hail/wisconsin/2026).

Wind damage

The same HailGeeks dataset for Sep 15, 2026, includes **wind damage reports** in the Green Bay area, though the exact wind speeds are not listed in the summary. The "Home Inspection Score" for some hail events that day is marked *Moderate*, which typically corresponds to wind damage in the **30–50 mph range** or higher, capable of damaging siding, roofing, and trees www.hailgeeks.com.

Stormersite's 2026 Wisconsin hail/wind data shows **97 wind reports statewide** in 2026, with many occurring in September [Stormer Site](https://www.stormersite.com/hail/wisconsin/2026), but does not break down by exact date for Green Bay.

Context

- Hail severity:** 2.25-inch hail can cause moderate damage to roofs, siding, and vehicles, and is often accompanied by gusty winds www.hailgeeks.com.
- Wind damage:** While the exact wind speeds for Sep 15, 2026, in Green Bay are not specified, the "moderate" damage classification in the hail map suggests significant wind impact alongside the hail www.hailgeeks.com.

SPONSORED LINKS

20 Most Miserable Cities in US

On September 7, 2026, Albuquerque experienced strong winds, with maximum gusts recorded near gale force levels.

Wind Speeds and Gusts

Based on historical weather data from Albuquerque International Airport, the **reported wind speeds on September 7, 2026 included daytime gusts approaching the upper range of the Beaufort scale for gale force winds**, which corresponds roughly to 39–54 mph [↪ Weather Spark](#) . Hourly wind records indicate periods of sustained winds with occasional sharp gusts throughout the day. While exact peak gusts are not specified in summary charts, the red tick marks on historical plots suggest that at least some gusts were **closely approaching or within gale force limits**.

Context and Conditions

- The daily wind pattern included variable directions with a tendency from the **south/southwest**, common for the region during late summer.
- Temperatures were consistent with Albuquerque's early September averages, providing typical daytime thermal gradients that can enhance wind speeds [↪ 1](#) .
- There were no significant reports of officially issued tornado or severe thunderstorm warnings specific to September 7, 2026, but strong winds at this magnitude can contribute to local hazards including airborne debris, minor property damage, or difficult travel conditions [↪ 1](#) .

[🔗 ↪ 2 Sources](#)

Interpretation

Gale-force winds are defined as sustained surface winds of 34–40 knots (39–46 mph) or higher. Historical observations from Albuquerque suggest that this period met the lower threshold of gale-force conditions primarily in gusts rather than sustained winds. While overall weather reports do not indicate a severe weather emergency on that day, these wind conditions were **strong enough to be notable for aviation, outdoor activities, and minor precautionary measures**.

In conclusion, September 7, 2026 in Albuquerque saw **strong wind gusts likely in the upper 30s to low 40s mph**, which qualifies as gale force for brief periods. This historical wind record provides insight into the

local climate patterns and risks for that time [↪ Weather Spark](#)
